

Summary

Industry:	Food - Bakery & Cereals
Application:	Condition Monitoring
Actual Saving:	Reduced maintenance & avoidance of premature failures
Payback Period:	Immediate

Condition Monitoring Package Improves Reliability

ISSUE

A large cereal manufacturer was experiencing frequent failures of equipment in remote areas of their site.

They were repairing assets through a third party who didn't provide any explanations of failure modes, and preventative measures that should be taken to avoid failure again.

SOLUTION

Following an in-depth consultation with the site engineers ERIKS were able to offer a condition monitoring package to monitor the plant on a regular basis.

Any items identified in critical condition could easily be removed for repair and failure analysis before catastrophic failures occurred costing the manufacturer dearly in lost production.

ERIKS now work with the customer annually to deliver vibration analysis and thermography surveys, with repairable items going to the local ERIKS repair workshop to keep the customer up and running.

OTHER BENEFITS

- Application expertise
- Predictive maintenance
- Increased equipment availability

FURTHER COMMENTS...

The customer has increased plant productivity and reliability through ERIKS' preventative maintenance expertise.
