

## Summary

<b>Industry:</b>	Food - Prepared Foods
<b>Application:</b>	Air Leak Survey
<b>Actual Saving:</b>	£25,000
<b>Payback Period:</b>	N/A

## Condition monitoring identifies major air leak issue

### ISSUE

The customer, a major food manufacturer, was experiencing a number of air leaks across multiple applications on their site. These leaks represented significant energy loss, resulting in wasted money.

Although the customer was well aware of the leaks and energy loss they lacked the ability to accurately identify the source of the leaks, so ERIKS was tasked with finding the root causes and solutions to this costly issue.

### SOLUTION

The customer's local Service Centre arranged for an ERIKS Condition Monitoring team to carry out an Air Leak survey on site to ascertain the losses they were experiencing. The survey highlighted an estimated total loss of £25,000 per year.

ERIKS provided the customer with the necessary items and recommendation to fix their leaks, which were implemented promptly so they could take advantage of the savings immediately.

### OTHER BENEFITS

- Cost & energy saving
- In-house technical support

### FURTHER COMMENTS...

The great success of this air survey has meant the customer incorporated air leak survey into their annual planned preventative maintenance supported by ERIKS.
